

ABSTRACT of the DISCLOSURE

What my invention brings that is new to the field of dentistry is the following: the saliva ejector tip which I have designed with holes in it rather than slots (as in existing tips) will not suck in snag or injure the delicate tissue of the floor of the mouth. Most of us have endured this unpleasant experience, as the saliva ejector is used during the majority of procedures in dentistry. As a dentist and as a patient this is a problem I would like to have eliminated in a simple and cost effective way. As a dentist, I believe a saliva ejector with such a tip will be universally accepted and widely used
